Managerial Accounting is concerned with how accounting information is used internally within a firm. The focus of this course is on understanding how such information is used in (a) planning and evaluation, (b) decision support, and (c) cost management and control. We will begin each topic by reviewing the basic accounting procedures, and proceed by analyzing how such procedures can be usefully employed by management. Much more emphasis will be placed on the use of accounting information than on its preparation.

Course materials
Textbook: Introduction to Management Accounting, Chapters 1-14, 14th edition by Horngren, Sundem, Stratton, Schatzberg and Burgstahler (Publisher: Prentice Hall)
Textpac: Made available via study.net
